

Pressure Washing Your Home Disclaimer

From the Owner:

We are thankful for the opportunity to pressure wash your home or business. Pressure washing does one of two things, cleans your surface or can also be helpful in preparing your surface for sanding or scraping for a paint job. *Our goal* as a business is to use pressure washing as a surface cleaner to beautify your home or business unless other instructed differently by the owner. We do have some precautions to insure the safety of the property we are cleaning.

We never clean the sides of homes or building with high pressure. Instead we implement a technique that uses low pressure with the aid of cleaner and/or detergents.

While every effort is made to protect you and your property from damages or injuries there are some issues that can arise:

1. We assume no liability for things beyond our control, but not limited to paint chipping or fading, defective or worn door and window seals and gaskets, loose vinyl siding, faulty exterior electrical outlets, as well as plants/flower damage.
2. Please be aware under some circumstances there can be streaking on siding.
3. Pressure washing may reveal imperfections in surfaces that were not visible prior to cleaning, heavy build ups of mold and dirt may be hiding other problems such as cracks, oil or rust stains, wood rot, flaking or missing paint. In some circumstances the removal of a stain may not be possible or practical, and replacement of surface or repainting may be necessary.

Before our visit we need for you to prepare in the following ways:

1. Put towels in all the windows and secure screens or remove.
2. Put towels around the bottoms of doors
3. Secure all light globes
4. Move any furniture, flower pots or other items within 6 feet of the exterior walls to ensure no damage of items and safety of our team member. (unless previous arrangements are made with company)
5. Keep pets and children inside while we are there, unless accompanied by a parent.
6. Chemicals dripping off your house can damage clothes or cause flesh burns, and may damage other surfaces, items or plants, including shrubs, grasses, annuals and perennials.
7. Have adequate space in driveway and/or street for pressure washing trailer.

Check all exterior outlets for tripped breakers & make sure all appliances are working immediately after we leave.
